Pre-arranged to supply a GEKO IRH illuminator

Pre-arranged for internal cable management bracket

## DESCRIPTION

The VERSO Hi-PoE IPM housing optimally exploits POE and Hi-POE technology, using the power supplied by the Ethernet cable as the sole source of power for all the devices connected, thus ensuring the maximum efficiency and flexibility of the network system as well as user-friendly installation and low costs.

The innovative IPM (Intelligent Power Management) system enables extremely quick and easy installation with the use of a single Ethernet connecting cable.

The Hi-POE IPM system automatically detects all the options, like heating, fan and illuminator and then autonomously balances the power to ensure suitable distribution of the same to the connected devices. This guarantees the optimal operation of the IP camera between -30°C (-22°F) and +60°C (140°F), with heat regulation and cold start (activation at low temperature).

The Analogue system, with previously installed camera housings, can be retrofitted on IPM system simply by changing the slide and the internal electronics. This enables the digital conversion, speeding up the installation and thereby minimizing costs and environmental impact.
